SAFETY DATA SHEET
AeroShell Grease 33

SECTION 1. IDENTIFICATION

Product name : AeroShell Grease 33

Product code : 001A0903

Manufacturer or supplier’s details
Manufacturer/Supplier : Shell Oil Products US
                      PO Box 4427
                      Houston TX  77210-4427
                      USA
SDS Request : (+1) 877-276-7285
Customer Service : 

Emergency telephone number
Spill Information : 877-504-9351
Health Information : 877-242-7400

Recommended use of the chemical and restrictions on use
Recommended use : Synthetic grease for aircraft., For further details consult the AeroShell Book on www.shell.com/aviation.

Restrictions on use : This product must be used, handled and applied in accordance with the requirements of the equipment manufacturer’s manuals, bulletins and other documentation.

SECTION 2. HAZARDS IDENTIFICATION

GHS classification in accordance with 29 CFR 1910.1200
Skin sensitisation : Category 1

GHS label elements
Hazard pictograms : 

Signal word : Warning

Hazard statements : PHYSICAL HAZARDS:
                   Not classified as a physical hazard under GHS criteria.
HEALTH HAZARDS:
H317 May cause an allergic skin reaction.
ENVIRONMENTAL HAZARDS:
Not classified as an environmental hazard under GHS criteria.
Precautionary statements:

Prevention:
P280 Wear protective gloves/ protective clothing/ eye protection/ face protection.

Response:
P302 + P352 IF ON SKIN: Wash with plenty of water and soap. P333 + P313 If skin irritation or rash occurs: Get medical advice/ attention.

Storage:
No precautionary phrases.

Disposal:
P501 Dispose of contents/ container to an approved waste disposal plant.

Hazardous components which must be listed on the label:
Contains alkyl thiadiazole.
Contains dialkyl sulphide.

Other hazards which do not result in classification
Prolonged or repeated skin contact without proper cleaning can clog the pores of the skin resulting in disorders such as oil acne/folliculitis. Used oil may contain harmful impurities. High-pressure injection under the skin may cause serious damage including local necrosis. Not classified as flammable but will burn. The classification of this material is based on OSHA HCS 2012 criteria.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Chemical nature: A lubricating grease containing polyolefins, synthetic esters and additives. Highly refined mineral oil. The highly refined mineral oil contains <3% (w/w) DMSO-extract, according to IP346.

Hazardous components

SECTION 4. FIRST-AID MEASURES

If inhaled: No treatment necessary under normal conditions of use. If symptoms persist, obtain medical advice.

In case of skin contact: Remove contaminated clothing. Flush exposed area with water and follow by washing with soap if available. If persistent irritation occurs, obtain medical attention.

When using high pressure equipment, injection of product under the skin can occur. If high pressure injuries occur, the casualty should be sent immediately to a hospital. Do not wait for symptoms to develop. Obtain medical attention even in the absence of apparent wounds.

In case of eye contact: Flush eye with copious quantities of water. Remove contact lenses, if present and easy to do. Continue rinsing. If persistent irritation occurs, obtain medical attention.

If swallowed: In general no treatment is necessary unless large quantities are swallowed, however, get medical advice.

Most important symptoms and effects, both acute and delayed: Skin sensitisation (allergic skin reaction) signs and symptoms may include itching and/or a rash. Oil acne/folliculitis signs and symptoms may include formation of black pustules and spots on the skin of exposed areas. Ingestion may result in nausea, vomiting and/or diarrhoea. Local necrosis is evidenced by delayed onset of pain and tissue damage a few hours following injection.

Protection of first-aiders: When administering first aid, ensure that you are wearing the appropriate personal protective equipment according to the incident, injury and surroundings.

Indication of any immediate medical attention and special treatment needed: Treat symptomatically.

High pressure injection injuries require prompt surgical intervention and possibly steroid therapy, to minimise tissue damage and loss of function. Because entry wounds are small and do not reflect the seriousness of the underlying damage, surgical exploration to determine the extent of involvement may be necessary. Local anaesthetics or hot soaks should be avoided because they can contribute to swelling, vasospasm and ischaemia. Prompt surgical decompression, debridement and evacuation of for-
SAFETY DATA SHEET  
AeroShell Grease 33

SECTION 5. FIRE-FIGHTING MEASURES

Suitable extinguishing media: Foam, water spray or fog. Dry chemical powder, carbon dioxide, sand or earth may be used for small fires only.

Unsuitable extinguishing media: Do not use water in a jet.

Specific hazards during firefighting: Hazardous combustion products may include: A complex mixture of airborne solid and liquid particulates and gases (smoke). Carbon monoxide may be evolved if incomplete combustion occurs. Unidentified organic and inorganic compounds.

Specific extinguishing methods: Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.

Special protective equipment for firefighters: Proper protective equipment including chemical resistant gloves are to be worn; chemical resistant suit is indicated if large contact with spilled product is expected. Self-Contained Breathing Apparatus must be worn when approaching a fire in a confined space. Select fire fighter’s clothing approved to relevant Standards (e.g. Europe: EN469).

SECTION 6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures: Avoid contact with skin and eyes.

Environmental precautions: Use appropriate containment to avoid environmental contamination. Prevent from spreading or entering drains, ditches or rivers by using sand, earth, or other appropriate barriers.

Methods and materials for containment and cleaning up: Shovel into a suitable clearly marked container for disposal or reclamation in accordance with local regulations.

Additional advice: For guidance on selection of personal protective equipment see Chapter 8 of this Safety Data Sheet. For guidance on disposal of spilled material see Chapter 13 of this Safety Data Sheet.

SECTION 7. HANDLING AND STORAGE

Technical measures: Use local exhaust ventilation if there is risk of inhalation of
vapours, mists or aerosols. Use the information in this data sheet as input to a risk assessment of local circumstances to help determine appropriate controls for safe handling, storage and disposal of this material.

Advice on safe handling: Avoid prolonged or repeated contact with skin. Avoid inhaling vapour and/or mists. When handling product in drums, safety footwear should be worn and proper handling equipment should be used. Properly dispose of any contaminated rags or cleaning materials in order to prevent fires.

Avoidance of contact: Strong oxidising agents.

Recommended storage temperature: -50 - 50 °C

Further information on storage stability: Keep container tightly closed and in a cool, well-ventilated place. Use properly labeled and closable containers.

Packaging material: Suitable material: For containers or container linings, use mild steel or high density polyethylene. Unsuitable material: PVC.

Container Advice: Polyethylene containers should not be exposed to high temperatures because of possible risk of distortion.

SECTION 8. EXPOSURE CONTROLS AND PERSONAL PROTECTION

Components with workplace control parameters

Biological occupational exposure limits

No biological limit allocated.

Monitoring Methods

Monitoring of the concentration of substances in the breathing zone of workers or in the general workplace may be required to confirm compliance with an OEL and adequacy of exposure controls. For some substances biological monitoring may also be appropriate. Validated exposure measurement methods should be applied by a competent person and samples analysed by an accredited laboratory. Examples of sources of recommended exposure measurement methods are given below or contact the supplier. Further national methods may be available.

Occupational Safety and Health Administration (OSHA), USA: Sampling and Analytical Methods http://www.osha.gov/
Health and Safety Executive (HSE), UK: Methods for the Determination of Hazardous Substances http://www.hse.gov.uk/

Institut für Arbeitsschutz Deutschen Gesetzlichen Unfallversicherung (IFA), Germany http://www.dguv.de/inhalt/index.jsp

L'Institut National de Recherche et de Securité, (INRS), France http://www.inrs.fr/accueil

Engineering measures: The level of protection and types of controls necessary will vary depending upon potential exposure conditions. Select controls based on a risk assessment of local circumstances. Appropriate measures include:
Adequate ventilation to control airborne concentrations.

Where material is heated, sprayed or mist formed, there is greater potential for airborne concentrations to be generated.

General Information:
Define procedures for safe handling and maintenance of controls.
Educate and train workers in the hazards and control measures relevant to normal activities associated with this product.
Ensure appropriate selection, testing and maintenance of equipment used to control exposure, e.g. personal protective equipment, local exhaust ventilation.
Drain down system prior to equipment break-in or maintenance.
Retain drain downs in sealed storage pending disposal or subsequent recycle.
Always observe good personal hygiene measures, such as washing hands after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants. Discard contaminated clothing and footwear that cannot be cleaned. Practice good housekeeping.

Personal protective equipment
Respiratory protection: No respiratory protection is ordinarily required under normal conditions of use.
In accordance with good industrial hygiene practices, precautions should be taken to avoid breathing of material.
If engineering controls do not maintain airborne concentrations to a level which is adequate to protect worker health, select respiratory protection equipment suitable for the specific conditions of use and meeting relevant legislation.
Check with respiratory protective equipment suppliers. Where air-filtering respirators are suitable, select an appropriate combination of mask and filter.
Select a filter suitable for the combination of organic gases and vapours [Type A/Type P boiling point >65°C (149°F)].
Hand protection
Remarks: Where hand contact with the product may occur the use of gloves approved to relevant standards (e.g. Europe: EN374, US: F739) made from the following materials may provide suitable chemical protection. PVC, neoprene or nitrile rubber gloves Suitability and durability of a glove is dependent on usage, e.g. frequency and duration of contact, chemical resistance of glove material, dexterity. Always seek advice from glove suppliers. Contaminated gloves should be replaced. Personal hygiene is a key element of effective hand care. Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed moisturizer is recommended. For continuous contact we recommend gloves with breakthrough time of more than 240 minutes with preference for > 480 minutes where suitable gloves can be identified. For short-term/splash protection we recommend the same, but recognize that suitable gloves offering this level of protection may not be available and in this case a lower breakthrough time maybe acceptable so long as appropriate maintenance and replacement regimes are followed. Glove thickness is not a good predictor of glove resistance to a chemical as it is dependent on the exact composition of the glove material. Glove thickness should be typically greater than 0.35 mm depending on the glove make and model.

Eye protection: Wear full face shield if splashes are likely to occur.

Skin and body protection: Wear chemical resistant gloves/gauntlets and boots. Where risk of splashing, also wear an apron.

Protective measures: Personal protective equipment (PPE) should meet recommended national standards. Check with PPE suppliers.

Thermal hazards: Not applicable

Environmental exposure controls

General advice: Take appropriate measures to fulfill the requirements of relevant environmental protection legislation. Avoid contamination of the environment by following advice given in Chapter 6. If necessary, prevent undissolved material from being discharged to waste water. Waste water should be treated in a municipal or industrial waste water treatment plant before discharge to surface water. Local guidelines on emission limits for volatile substances must be observed for the discharge of exhaust air containing vapour.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance: Semi-solid at room temperature.
Colour: blue green
Odour: Slight hydrocarbon
Odour Threshold: Data not available
pH: Not applicable
Drop point: 216 °C / 421 °F
   Method: Unspecified
Initial boiling point and boiling range: Data not available
Flash point: >= 215 °C / 419 °F
   Method: ASTM D93 (PMCC)
Evaporation rate: Data not available
Flammability (solid, gas): Data not available
Upper explosion limit / upper flammability limit: Typical 10 %(V)
Lower explosion limit / Lower flammability limit: Typical 1 %(V)
Vapour pressure: < 0.5 Pa (20 °C / 68 °F)
   estimated value(s)
Relative vapour density: > 1
   estimated value(s)
Relative density: 1.000 (15 °C / 59 °F)
Density: <= 1,000 kg/m3 (15.0 °C / 59.0 °F)
   Method: Unspecified
Solubility(ies)
   Water solubility: negligible
   Solubility in other solvents: Data not available
Partition coefficient: n-octanol/water: log Pow: > 6
   (based on information on similar products)
Auto-ignition temperature: > 320 °C / 608 °F
 Decomposition temperature: Data not available
Viscosity
- Viscosity, dynamic: Data not available
- Viscosity, kinematic: Not applicable

Explosive properties: Not classified

Oxidizing properties: Data not available

Conductivity: This material is not expected to be a static accumulator.

SECTION 10. STABILITY AND REACTIVITY

Reactivity: The product does not pose any further reactivity hazards in addition to those listed in the following sub-paragraph.

Chemical stability: Stable.

Possibility of hazardous reactions: Reacts with strong oxidising agents.

Conditions to avoid: Extremes of temperature and direct sunlight.

Incompatible materials: Strong oxidising agents.

Hazardous decomposition products: No decomposition if stored and applied as directed.

SECTION 11. TOXICOLOGICAL INFORMATION

Basis for assessment: Information given is based on data on the components and the toxicology of similar products. Unless indicated otherwise, the data presented is representative of the product as a whole, rather than for individual component(s).

Information on likely routes of exposure
Skin and eye contact are the primary routes of exposure although exposure may occur following accidental ingestion.

Acute toxicity

Product:
- Acute oral toxicity: LD50 (rat): > 5,000 mg/kg
  Remarks: Low toxicity:
  Based on available data, the classification criteria are not met.

- Acute inhalation toxicity: Remarks: Based on available data, the classification criteria are not met.

- Acute dermal toxicity: LD50 (Rabbit): > 5,000 mg/kg
  Remarks: Low toxicity:
  Based on available data, the classification criteria are not met.
### Components:

**Polyolefin:**
- Acute inhalation toxicity: Remarks: Mortality observed is due to aspiration of the material into the lungs, rather than intrinsic toxicity of the test substance. Acute toxicity caused by inhalation of this material is considered to be a highly unrealistic scenario in humans.

**Skin corrosion/irritation**
- **Product:**
  - Remarks: Slightly irritating to skin. Prolonged or repeated skin contact without proper cleaning can clog the pores of the skin resulting in disorders such as oil acne/folliculitis. Based on available data, the classification criteria are not met.

**Serious eye damage/eye irritation**
- **Product:**
  - Remarks: Slightly irritating to the eye. Based on available data, the classification criteria are not met.

**Respiratory or skin sensitisation**
- **Product:**
  - Remarks: Skin sensitiser.

### Components:

**Alkyl thia-diazole:**
- Remarks: May cause an allergic skin reaction in sensitive individuals.

**Naphthenic acid:**
- Remarks: May cause an allergic skin reaction in sensitive individuals.

**Dialkyl sulphide:**
- Remarks: May cause an allergic skin reaction in sensitive individuals.

### Germ cell mutagenicity
- **Product:**
  - Remarks: Non mutagenic, Based on available data, the classification criteria are not met.

### Carcinogenicity
- **Product:**
  - Remarks: Not a carcinogen. Based on available data, the classification criteria are not met.
  - Remarks: Product contains mineral oils of types shown to be non-carcinogenic in animal skin-

AeroShell Grease 33

Version: 6.0  Revision Date: 05/25/2018  SDS Number: 800001005309  Print Date: 05/26/2018  Date of last issue: 07/02/2015

Painting studies., Highly refined mineral oils are not classified as carcinogenic by the International Agency for Research on Cancer (IARC).

**IARC**

No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.

**OSHA**

No component of this product present at levels greater than or equal to 0.1% is on OSHA’s list of regulated carcinogens.

**NTP**

No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

**Reproductive toxicity**

**Product:**

Remarks: Not a developmental toxicant., Does not impair fertility., Based on available data, the classification criteria are not met.

**STOT - single exposure**

**Product:**
Remarks: Based on available data, the classification criteria are not met.

**STOT - repeated exposure**

**Product:**
Remarks: Based on available data, the classification criteria are not met.

**Aspiration toxicity**

**Product:**
Not an aspiration hazard.

**Further information**

**Product:**
Remarks: Used grease may contain harmful impurities that have accumulated during use. The concentration of such harmful impurities will depend on use and they may present risks to health and the environment on disposal., ALL used grease should be handled with caution and skin contact avoided as far as possible.

Remarks: High pressure injection of product into the skin may lead to local necrosis if the product is not surgically removed.

Remarks: Slightly irritating to respiratory system.
## SECTION 12. ECOLOGICAL INFORMATION

### Basis for assessment
Ecotoxicological data have not been determined specifically for this product. Information given is based on a knowledge of the components and the ecotoxicology of similar products. Unless indicated otherwise, the data presented is representative of the product as a whole, rather than for individual component(s). (LL/EL/IL50 expressed as the nominal amount of product required to prepare aqueous test extract).

### Ecotoxicity

**Product:**

| Toxicity to fish (Acute toxicity) | Remarks: LL/EL/IL50 > 100 mg/l  
Practically non toxic: Based on available data, the classification criteria are not met. |
|----------------------------------|------------------------------------------------------------------|
| Toxicity to daphnia and other aquatic invertebrates (Acute toxicity) | Remarks: LL/EL/IL50 > 100 mg/l  
Practically non toxic: Based on available data, the classification criteria are not met. |
| Toxicity to algae (Acute toxicity) | Remarks: LL/EL/IL50 > 100 mg/l  
Practically non toxic: Based on available data, the classification criteria are not met. |
| Toxicity to fish (Chronic toxicity) | Remarks: Data not available |
| Toxicity to daphnia and other aquatic invertebrates (Chronic toxicity) | Remarks: Data not available |
| Toxicity to microorganisms (Acute toxicity) | Remarks: Data not available |

### Persistence and degradability

**Product:**

| Biodegradability | Remarks: Not readily biodegradable. Major constituents are inherently biodegradable, but contains components that may persist in the environment. |

### Bioaccumulative potential

**Product:**

| Bioaccumulation | Remarks: Contains components with the potential to bioaccumulate. |
Mobility in soil

**Product:**

Mobility

Remarks: Semi-solid under most environmental conditions. If it enters soil, it will adsorb to soil particles and will not be mobile.

Remarks: Floats on water.

Other adverse effects

**Product:**

Additional ecological information

Does not have ozone depletion potential, photochemical ozone creation potential or global warming potential. Product is a mixture of non-volatile components, which will not be released to air in any significant quantities under normal conditions of use.

Poorly soluble mixture.

Causes physical fouling of aquatic organisms.

Mineral oil does not cause chronic toxicity to aquatic organisms at concentrations less than 1 mg/l.

SECTION 13. DISPOSAL CONSIDERATIONS

**Disposal methods**

**Waste from residues:**

Recover or recycle if possible.

It is the responsibility of the waste generator to determine the toxicity and physical properties of the material generated to determine the proper waste classification and disposal methods in compliance with applicable regulations.

Do not dispose into the environment, in drains or in water courses.

Waste product should not be allowed to contaminate soil or ground water, or be disposed of into the environment.

Waste, spills or used product is dangerous waste.

**Contaminated packaging**

Dispose in accordance with prevailing regulations, preferably to a recognized collector or contractor. The competence of the collector or contractor should be established beforehand. Disposal should be in accordance with applicable regional, national, and local laws and regulations.

**Local legislation**

Remarks: Disposal should be in accordance with applicable regional, national, and local laws and regulations.
SECTION 14. TRANSPORT INFORMATION

National Regulations

US Department of Transportation Classification (49 CFR Parts 171-180)
Not regulated as a dangerous good

International Regulations

IATA-DGR
Not regulated as a dangerous good

IMDG-Code
Not regulated as a dangerous good

Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code
Not applicable for product as supplied. MARPOL Annex 1 rules apply for bulk shipments by sea.

Special precautions for user

Remarks:
Special Precautions: Refer to Chapter 7, Handling & Storage, for special precautions which a user needs to be aware of or needs to comply with in connection with transport.

SECTION 15. REGULATORY INFORMATION

EPCRA - Emergency Planning and Community Right-to-Know Act

CERCLA Reportable Quantity
